🕒 aquasana.

PERFORMANCE DATA SHEET

Model	Replacement	Recovery Rating	Operating Temp. Range	Operating Pressure Range	Efficiency rating	Daily Production (DPR)	Capacity
AQ-SFRO	AQ-SFRO-S1S3, AQ-SFRO-S2, and AQ-SFRO-REMIN	42.8%	40-100° F 4.44-37° C	40-100 psi 275-689 kPa	27.4%	25.7 gpd 97.3 liters	365 gal 1382 liters

Manufactured by: Aquasana, Inc. 4343 Hamilton Road · Groveport, OH 43125

This system has been tested according to NSF/ANSI Standards 42, 53, 58, 401, and CSA B483.1 for the reduction of the substances listed below. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system, as specified in NSF/ANSI 42, 53, 58, 401, and CSA B483.1.

NSF/ANSI 42	Reduction Requirement	Overall % Reduction	Results	Table 8.2 – Performance data sheet reduction claims for organic chemicals included by surrogate testing					
Chlorine Reduction, Free Available		≥50%	96.8%	Pass	VOCs (by surrogate testing	Drinking water	Influent/	Effluent/	Percent

Filter is only to be used with cold water. Testing was performed (f Systems certified for cyst reduction may be used on disinfected waters that may contain filterable cysts.

under standard laboratory conditions, actual

performance may vary.

This system is acceptable for treatment of influent concentrations of no This system is acceptable for retarment or internet concentrations of ino more than 27 mg/L nitrate and 3 mg/L initrate in combination measured as N and is certified for nitrate/nitrile reduction only for water supplies with a pressure of 40 psi or greater. The chlorine claim is based on chloramine reduction as a surrogate.

· All contaminants reduced by this filter are listed.

chloroform (THM) chlorodibromomethane (THM)

xylenes (total)

- · Not all contaminants listed may be present in your water.
- Does not remove all contaminants that may be present in tap water.

10

 The contaminants covered in NSF/ANSI 401 have been deemed as incidental/emerging compounds and have been detected in drinking water supplies at trace levels. These compounds can affect some consumers' perception of drinking water quality.

0.070

0.001

>99%

 Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.
